

Electric Remote Conversion Kit by GritSablare

TECHNICAL DETAILS

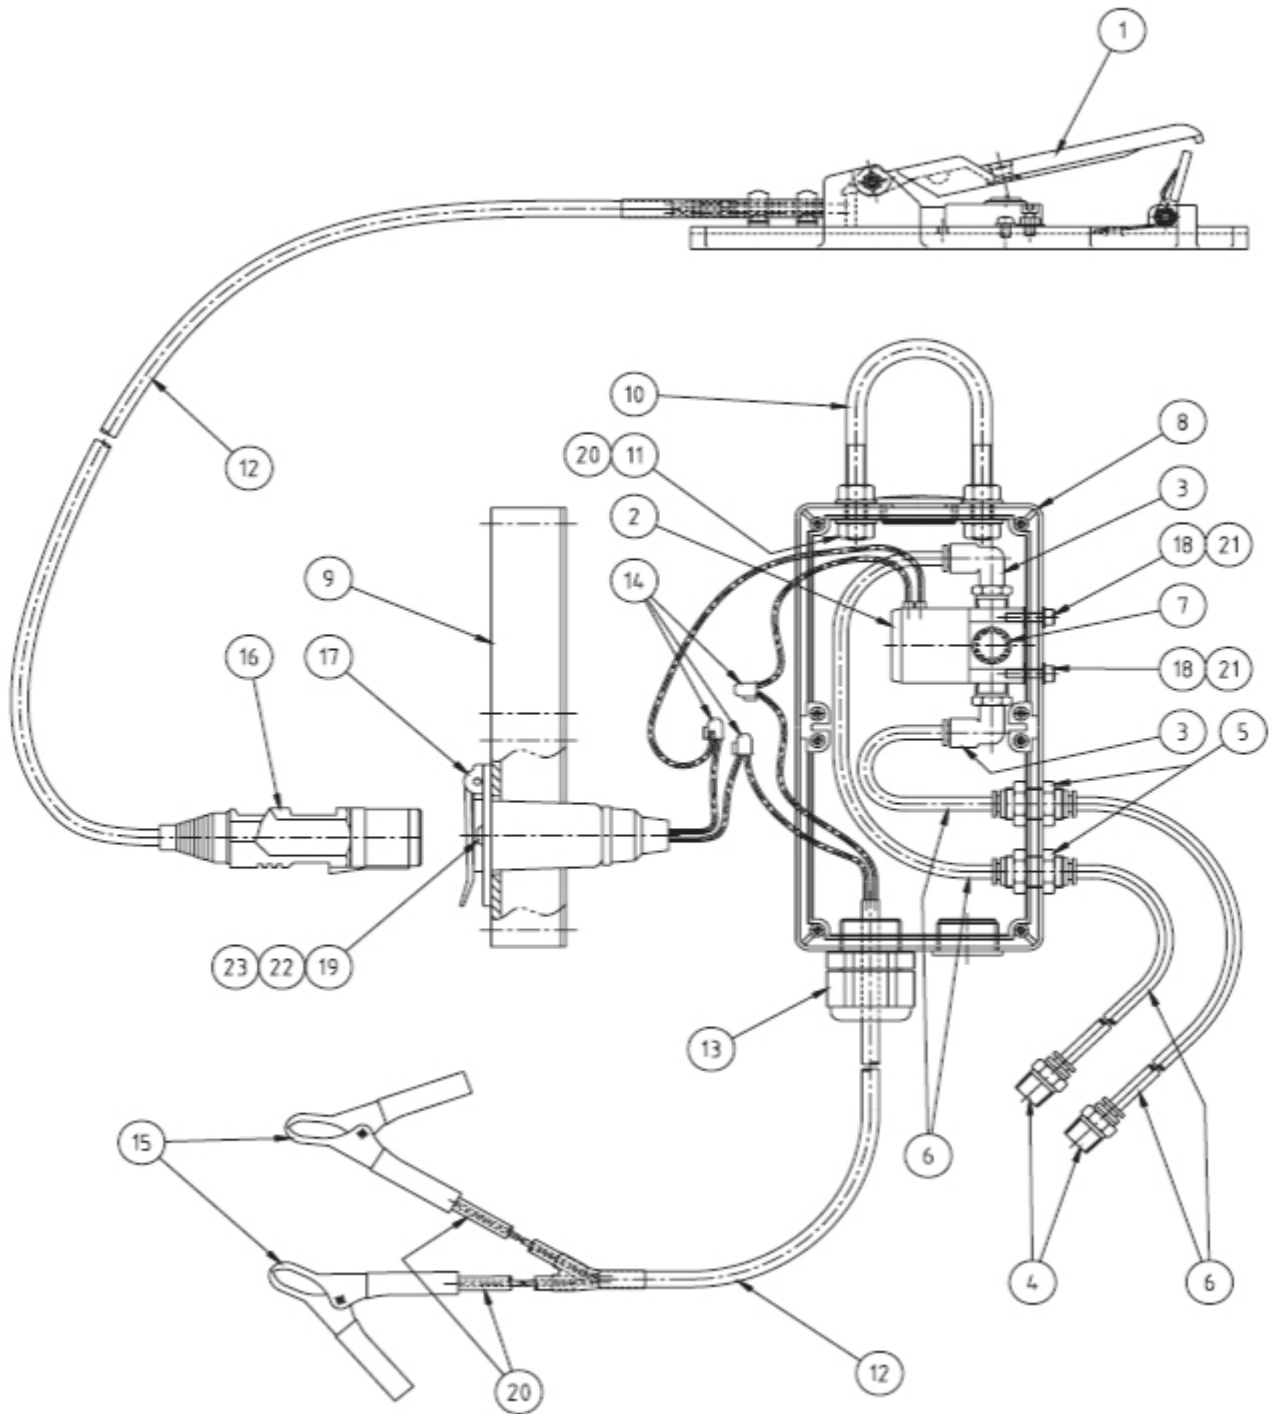

Section 1. Features & Benefits:

- The Electric Remote Control conversion kits operate as an electrical remote control system in place of the traditional pneumatic type twinline systems. The Electric Remote Control Conversion kit is connected to any pneumatically controlled blast pot control valve using either a 12 Volt or 24 Volt electrical cable arrangement (other voltages are available upon request).
- When activated by the operator, the Electric Remote Control Conversion kit provides an efficient deadman remote control system that is electrically controlled providing increased operational speed when abrasive blasting with longer lengths of blasting hoses.
